TECHNICAL SKILLS Core Java, Java 8+, J2EE, Spring Boot, Spring MVC, Spring IOC, Spring Data JPA, Technologies : Rest APIs , Hibernate, Servlet and JSP, JDBC, Multithreading, Collection Framework.

Frameworks-: Spring, Spring Boot, Spring MVC ,Spring Security, Hibernate.

Tools +AI : Maven, JIRA, GIT, Swagger, Eclipse, STS, VSCode, AI tools - Opencode,ollama,antigravity ,claude

Database: MySQL, SQL,SQL Server.

Application Server: Apache Tomcat9, 10 webserver

Others: HTML, CSS, JavaScript(Basic) ,nodejs(basic)

- Good knowledge of **Design Patterns** like Singleton, Factory and **DTO**(Data transfer Object).
- **MicroServices** : Understanding of microservice architecture, service registry(Eureka server) or Service -discovery, inter-service communication(Feign client), API Gateway,Admin-Server,zipkin.
- **Message Brokers & Streaming:** Basic knowledge of Apache Kafka – producers, consumers, topics, and event-driven communication using Spring Boot.
- **DevOps and Tools:**Github,(Basic)GitLab,Docker,**AWS**(EC2,S3,IAM,RDS,Lambda,VPC)

WORK EXPERIENCE

WEBEARN SOLUTION PVT LTD | Java Developer

June 2022– Present
Noida,Uttar-Pradesh

Designed and implemented scalable microservices using Spring Boot, Hibernate, and Spring Data JPA, Developed Bean classes for entity mappings andimplemented Controller and DAO layers for database interactions using MySQL.

Developed 20+ RESTful APIs secured with JWT & Spring Security, enabling secure authentication and role-based access for enterprise clients.

- ❖ I have 3.5+ years of extensive professional software development experience as a software developer, experience in the development, support, maintenance and implementation of medium to large sized components of a project module.
- ❖ I have worked with Java and J2EE technologies including Core Java, Servlet API, JDBC, Spring IOC, Spring Data JPA, Spring MVC, Hibernate Framework, SpringBoot and Rest API.
- ❖ Through knowledge of Spring modules like IOC, MVC and good knowledge of Spring Boot (Rest API, Spring Security, JPA, LOMBOK, and Postman)
- ❖ Knowledge of MySQL with experience in constructing tables, functions , SQL JOINS.
- ❖ Experience in Java8+,17, Multithreading and Collection Framework.

Projects :-

Project 1: S Chand Publication E-commerce book Selling platform **Dec 2023 - Present**
Tech Stack: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, MySQL, RESTful APIs, Postman.

Description: This platform was created to support Schand Publication's extensive catalog of educational books, making it easier for students and professionals to search, purchase, and track books across multiple categories. The backend, powered by Spring Boot, provides a robust and scalable solution for handling high-traffic e-commerce demands, with key features like advanced search, order management, and secure user authentication.

Roles and responsibilities:

- Built and maintained REST APIs for user management, book search and order processing.
- Developed RESTful Controller classes for request mappings and implemented business logics in Service classes.
- Developed efficient search capabilities allowing users to filter books by category, author, price, and other criteria. Using Hibernate and optimized SQL queries, the backend quickly returns relevant results while minimizing load times.
- Created backend processes for real-time order management from initial purchase to order

fulfillment and tracking.

- Designed and managed Oracle database schemas using Hibernate ORM, ensuring data consistency and efficient handling of high volumes of transaction data, book details and user records.

Project 2: Online Health Insurance Services

June 2022 - Nov 2023

Domain: **Insurance**

Client: **Harvard Pilgrims HealthCare, USA**

Team Size: **11 Member**

Role: **Java Backend Developer**

- **Environment:** Spring Boot, Spring MVC, Spring Data JPA, Hibernate, JSP, Collection Framework, Core Java, Java-8, MySQL, Postman

Description: Designed and developed an online health insurance services application that increased customer satisfaction by enabling customers to inquire about and subscribe to health insurance policies from different companies. The application allows customers to login and check the policy and plans with minimal effort, and when they need to claim, customers can easily search for a hospital nearby and get the money from the credit manager.

Roles and Responsibilities :

- Developed REST APIs with Spring Boot Framework that allows users to create and manage their accounts.
- Designed and delivered an efficient, customer-centric online health insurance service that increased customer satisfaction and retention.
- Reduced DAO object creation time by writing DAOs to load database tables with Hibernate instead of using SQL statements in the DAO.

Education :

Priyadarshini college of computer Sciences
(Dr A.P.J Abdul Kalam Technical University Lucknow)
B.Tech (Computer Science Engineering) with Aggregate

Greater Noida ,Uttar Pradesh
